(PCT Article 36 and Rule 70)

# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/AU2003/000690

With regard to the elements of the international application.*  the international application as originally filed.  the description, pages 1, 5-13, as originally filed, pages , filed with the demand, pages 2-4, received on 12 July 2004 with the letter of 12 July 2004  the claims, pages , as originally filed, pages , filed with the demand, pages 1-14, as originally filed, pages , filed with the demand, pages , received on with the letter of  the sequence listing part of the description:  pages , as originally filed pages , filed with the demand pages , received on with the letter of  With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.  These elements were available or furnished to this Authority in the following language which is:  the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).  the language of publication of the international application (under Rule 48.3(b)).  the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).	В	Basis of the report		
the international application as originally filed, pages 1, 5-13, as originally filed, pages 2-4, received on 12 July 2004 with the letter of 12 July 2004  the claims, pages , as amended (together with any statement) under Article 19, pages , as amended (together with any statement) under Article 19, pages , filed with the demand, pages , filed with the demand , filed pages , filed with the demand , filed to this Authority in the filed with the demand , filed to this Authority in computer readable form.  The statement that the information recorded in computer readable form in the international	With	h regard to the elements of the international app	lication:*	
pages 2.4, received on 12 July 2004 with the letter of 12 July 2004    the claims, pages as a soriginally filed, pages as a seriginally filed, pages as a seriginally filed, pages as a seriginally filed, pages as a filed with the demand, pages 14-19, received on 12 July 2004 with the letter of 12 July 2004    the drawings, pages 14-19, received on 2 July 2004 with the letter of 12 July 2004    the drawings, pages 1-14, as originally filed, pages as filed with the demand, pages are received on with the letter of   the sequence listing part of the description:   pages as originally filed pages are received on with the letter of   the sequence listing part of the description:   pages as originally filed pages are received on with the letter of   With regard to the language, all the elements marked above were available or furnished to this Authority in the letter of   With regard to the language, all the elements marked above were available or furnished to this furnished for the purposes of international search (under Rule 23.1(b)).   the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).   the language of publication of the international application (under Rule 48.3(b)).   the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).    With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:   contained in the international application in written form.   firmished subsequently to this Authority in written form.   The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as flied has been furnished.   The amendments have resulted in the cancellation of:   the description, pages   the claims, Nos.   the drawings, sheets/fig.   This report has been established as if (some of) the amend		the international application as originally file	<b>i.</b>	
pages 2.4, received on 12 July 2004 with the letter of 12 July 2004    the claims, pages as a soriginally filed, pages as a seriginally filed, pages as a soriginally filed, pages as a soriginally filed, pages at 14-19, received on 12 July 2004 with the letter of 12 July 2004    the drawings, pages 14-19, received on 2 July 2004 with the letter of 12 July 2004    the drawings, pages 1-14, as originally filed, pages as filed with the demand, pages as received on with the letter of   the sequence listing part of the description:   pages as originally filed pages as originally filed pages as originally filed pages as received on with the letter of   with regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language which is:   the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).     the language of publication of the international application (under Rule 48.3(b)).     the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).     With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:   contained in the international application in written form.     furnished subsequently to this Authority in written form.     furnished subsequently to this Authority in written form.     The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.     The amendments have resulted in the cancellation of:     the description, pages     the claims, Nos.     the drawings, sheets/fig.     This report has been established as if (some of) the amendments had not been made, sinc	$\overline{\mathbf{x}}$	the description, pages 1, 5-13, as origin	ally filed,

<sup>2.</sup> Citations and explanations (Rule 70.7)

## NOVELTY & INVENTIVE STEP Claims 1-15:

The inventive concept is an antenna element comprising a ground plane, a cylindrical helix with a uniform pitch disposed above the ground plane and connectable to a communications apparatus at a first helix end near the ground plane, and a second helix end opposite the first helix end where the antenna termination has a lateral spiral substantially centred on the axis of the cylindrical helix.

None of the prior art documents, or an obvious combination of such documents, disclose a cylindrical uniform pitch helix antenna terminating in a lateral spiral at the end away from the ground plane.

#### Summary

An antenna concept disclosed herein provides a simple medium gain antenna, based on a low profile helix terminated with a spiral. The antenna offers significantly higher antenna gain than patch antenna arrangements.

According to a first aspect of the invention, there is provided an antenna element comprising:

a ground plane:

5

10

15

20

25

a cylindrical helix having a uniform pitch, the cylindrical helix being disposed above the ground plane, the cylindrical helix being connectable to a communications apparatus at a first helix end, said first helix end being located near the ground plane; and

a lateral spiral substantially centred on the axis of the cylindrical helix, the spiral having a first end thereof connected to a second helix end, said second helix end being the opposite end of the cylindrical helix to the first helix end, said lateral spiral thereby terminating the antenna element.

According to another aspect of the invention, there is provided an antenna comprising:

a phased array feed network having an equipment feed-line for connection to communication apparatus and a plurality of element feed-lines for connection to a like plurality of cylindrical helix antenna elements, said phased array feed network being adapted to collectively connect said plurality of cylindrical helix antenna elements to the communication apparatus; and

said plurality of cylindrical helix antenna elements arranged in a domino pattern, each said cylindrical helix antenna element comprising a ground plane and a cylindrical helix having a uniform pitch disposed above the ground plane, each said cylindrical helix antenna element being individually connectable at a respective first cylindrical helix end located near the ground plane to a respective element feed-line of the phased array feed

network to thereby connect said cylindrical helix antenna element to the communications apparatus, wherein each said cylindrical helix antenna element further comprises a lateral spiral substantially centred on the axis of the cylindrical helix the lateral spiral having a first end thereof connected to a second helix end being the opposite end of the cylindrical helix to the first helix end, said spiral thereby terminating the antenna.

According to another aspect of the invention, there is provided an antenna comprising:

a ground plane:

5

10

15

20

25

a plurality of cylindrical helices disposed above the ground plane, each said cylindrical helix being connectable, via a respective feed line of an associated phased array feed network to a communications apparatus, at a respective first helix end located near the ground plane; and

a like plurality of lateral spirals, each substantially centred on the axis of the corresponding one of the plurality of cylindrical helices, said each lateral spiral having a first end thereof connected to a second helix end of the corresponding one of the plurality of helices, said second helix end being the opposite end of the cylindrical helix to the first helix end, said lateral spiral thereby terminating the corresponding helix.

According to another aspect of the invention, there is provided an antenna comprising:

a ground plane:

a plurality of cylindrical helices disposed above the ground plane, each said cylindrical helix being connectable, via a respective feed line of an associated switched element feed network to a communications apparatus, at a respective first helix end located near the ground plane; and

a like plurality of lateral spirals, each substantially centred on the axis of the corresponding one of the plurality of cylindrical helices, said each lateral spiral having a

first end thereof connected to a second helix end of the corresponding one of the plurality of cylindrical helices, said lateral spiral thereby terminating the corresponding helix.

According to another aspect of the invention, there is provided a method of impedance matching a cylindrical helix antenna element wherein the cylindrical helix antenna element comprises a ground plane, a cylindrical helix having a uniform pitch disposed above the ground plane, the cylindrical helix being connectable to a communications apparatus at a first helix end located near the ground plane, and a lateral spiral substantially centred on the axis of the cylindrical helix the lateral spiral having a first end thereof connected to a second helix end, said second helix end being the opposite end of the cylindrical helix to the first helix end, said lateral spiral thereby terminating the cylindrical helix antenna, said method comprising the steps of:

adjusting a distance, from the ground plane, of the first helix end located near the ground plane to thereby adjust the impedance of a tapered transmission line formed between the ground plane and a first quarter turn of the cylindrical helix.

Other aspects of the invention are also disclosed.

#### **Brief Description of the Drawings**

One or more embodiments of the present invention will now be described with reference to the drawings, in which:

Fig. 1 shows the disclosed helix antenna;
